

Please stop using our taxpayer funded "clean" energy credits and incentives to dirty wood burning biomass plants. Use them towards genuinely clean energy alternatives such as solar, geothermal, appropriately located wind and hydro, and conservation and efficiency measures. These decisions are going to affect our future and the future for our children. We need to start now and why not be one of the first states/cities to do so and show the way for a cleaner environment.

We do not need a new wood burning biomass plant here. Think about what you are doing. Go with change not the way we currently do things.

Why bring more issues into the city of Springfield when it already has so many to deal with already. We want Springfield to be a place where people want to come and live. Don't add another reason why they wouldn't want to.

Listen to what the people are telling you.....maybe we are right.
